CACG MINUTES OF MEETING

Meeting Date: Wednesday, 09 December 2015
Time: 16:00
Location: JAH Airport Management Centre, 16 Eagle Drive Jandakot

Members Attending

- CACG Chairperson – Steve Klomp
- Banjup Residents Group – Dino Elpitelli
- City of Cockburn – Andrew Trosic
- City of Cockburn – Cr. Lee-Anne Smith
- Jandakot Airport Holdings – John Fraser
- Jandakot Airport Operators Group – John Douglas
- JA Chamber of Commerce – Jack Garber
- Jandakot Residents & Ratepayers Association – Leanne Chaproniere
- Royal Aero Club of WA – Linda Maule

Observers/Advisers Attending

- Airservices Australia – Chris Murray
- Airservices Australia – Neil Hall
- Airservices Australia – David Moore
- Jandakot Airport Holdings – Sarah Harris (CACG Secretariat)
- Dept. of Infrastructure – Margaret Smythe
- Royal Flying Doctor Service – Matt Granger

Observer/Adviser Apologies

- City of Canning – Clint Burdett
- City of Gosnells – Andy Brighouse
- City of Melville – Cr. Clive Roberton
- Heliwest Group – Alan Bailey
- Dept. of Transport WA – Ian Petkoff
- Civil Aviation Safety Authority – Craig Peterson

Attendance/Apologies

1.1 Meeting attendance and apologies are noted above.

Previous Minutes

2.1 The previous minutes were accepted as a true and accurate record and can now be made available on the Jandakot Airport website.

Matters Arising from Previous Minutes

3.1 Previous minutes item 8.3 – the short term monitoring will be addressed in the Airservices update (agenda item 6).

Chairperson’s Update

4.1 Steve Klomp attended the CACG Chair’s Forum in Canberra the week after being elected as the new Jandakot CACG Chairperson. The Aircraft Noise Ombudsman presented the three main areas of focus for noise management: aviation industry commitment to technology; focus on best practice (e.g. education, town planning and flight procedures); and focus less on the impossible or unfair (there are mechanical and safety reasons for what aircraft and pilots do). Presentations were also made on why pilots fly the way they do, and the importance of the Master Plan for airport development.

4.2 John Douglas stated that more needs to be done about planning around airports. People buy houses in ignorance of the proximity to an airport and then say the aircraft noise is unacceptable. There doesn’t appear to be enough care or responsibility from local councils and planning authorities e.g. residents in the new Banjup Quarry development will be subject to noise from every circuit operation and yet that development has been allowed to proceed. Steve Klomp commented that most
ordinary people would not consider aircraft noise impact when purchasing a property. Andrew Trosic advised that the City of Cockburn does not agree with John’s comments as aircraft noise was taken into account and the planning framework provided for the urbanisation of this landholding to occur.

5 Royal Flying Doctor Service presentation

5.1 Matt Granger, Head of Training & Checking, gave a presentation on RFDS operations.
5.2 RFDS has bases at Jandakot, Kalgoorlie, Meekatharra, Port Hedland, Derby and Broome (under construction). Daily RFDS averages 25 patients flown and 52 aircraft landings across WA. RFDS budgets for 21,500 annual flying hours but is currently doing 24,000 annual flying hours.
5.3 The Hawker 125 aircraft (VH-RIO – based at Perth Airport) is nearing the end of its life span. RFDS is purchasing three PC-24 light jets for delivery in 2017. The PC-24 has a range of 3,610km and is capable of landing on dirt strips. It has the same wingspan as the PC-12 but is slightly longer. The PC-24 is quieter than the Hawker 125. In operational capability 1x PC-24 will replace 2x PC-12s.

6 Airservices Australia update

6.1 David Moore received 13 suggestions for specific sites for the short-term noise monitoring and these locations have been plotted on a map. Airservices will advise the noise consultants of the general location of the monitors and the consultants will determine the most suitable sites based on technical specifications. The site must have a power source, be secure, and not be too close to a highway or other significant noise source.
6.2 The noise monitors will record all noise events that are greater than 10 decibels above the established background noise level. Aircraft noise has a very specific noise signature and the software will separate the aircraft noise from other loud sounds (e.g. dog barking, school bell, lawnmower). Radar data will then be used to match an aircraft to the recorded noise events.
6.3 Some of the suggested sites are in sparsely populated areas and others are on the inside of circuit paths which will not pick up the bulk of the aircraft traffic. The location of monitors should be relevant to highly populated areas.
6.4 Short-term noise monitoring was initially requested by residential communities around the smaller airports. Monitoring is done for a variety of reasons, but the main purpose is to establish a base-line of noise level and frequency of noise around an airport. This provides the community with accurate information about the actual noise impact and also allows Airservices to evaluate the environmental noise impact from changed flight paths.
6.5 Dino Elpitelli stated that as a local resident he expects the monitoring to prove that the noise levels residents are exposed to will exceed the ANEF, and when that is established authorities can then insist on quieter planes and better flight paths. Neil Hall advised that the noise monitoring will not change how pilots or Air Traffic Control operate. Monitoring doesn’t generally provide any more value apart from understanding the actual noise impact.
6.6 The diagram of proposed locations will be distributed with the draft minutes.

7 Airservices Commitment to Aircraft Noise Management booklet

7.1 Dino Elpitelli requested that the ‘Airservices Commitment to Aircraft Noise Management’ booklet be included for discussion at this meeting. Dino stated that he has been repeatedly asking which agency/organisation is responsible for doing something about unacceptable aircraft noise and the booklet says that Airservices is responsible.
7.2 Neil Hall responded that under the Air Services Act [Cwlth], Airservices Australia is required to manage the environmental impact of aircraft operations within its control. Airservices has representatives attend all of the CACG meetings around Australia to ensure engagement with airports, operators and resident groups.

7.3 David Moore advised that he had tabled some copies of the booklet at the CACG on 14 November 2013 after the booklet was first released. It is publicly available on the Airservices website - [http://www.airservicesaustralia.com/wp-content/uploads/Aircraft_Noise_Management_WEB.pdf](http://www.airservicesaustralia.com/wp-content/uploads/Aircraft_Noise_Management_WEB.pdf). The booklet frequently states that managing the impacts of aircraft noise is a collaborative approach – there is not a single agency or organisation responsible, but rather a joint responsibility involving:

- Commonwealth Government (policy and legislation)
- State and Local Government (land use planning around airports)
- Civil Aviation Safety Authority (implements and enforces regulations e.g. aircraft worthiness and noise certification, airspace classification, safety, minimum altitude requirements)
- Airservices Australia (service provision - air traffic control, firefighting, aeronautical information, communication, navigation aids, complaint management, noise monitoring, provide information to the community)
- Aircraft Noise Ombudsman (independent review of Airservices noise complaint handling, information provision and consultation activities)
- Jandakot Airport (ground-based aircraft noise)
- Aircraft operators (compliance with regulations and noise abatement principles)
- Community (involvement in Master Plan and policy development processes, feedback to industry and government)

8 Jandakot Residents & Ratepayers Assoc. – Amelioration of Noise Management Plan proposal

| 8.1 | Leanne Chaproniere presented an Amelioration of Noise Management Plan proposal that was prepared by the Jandakot Residents & Ratepayers Association. |
| 8.2 | Leanne Chaproniere has lived in Hartwell Parade (Jandakot) for nine years. Before purchasing the property she read the Fly Neighbourly in place at the time. Fly Neighbourly did not advise prospective residents to spend time at the proposed property at night, so Leanne was not prepared for the circuit training that goes to 10:30pm. |
| 8.3 | JARRA lobbied the City of Cockburn about the Banjup Quarry redevelopment as the residents will be severely affected by aircraft noise. |
| 8.4 | Leanne Chaproniere reported that there is currently no process between noise and aircraft operations. What is missing is a process that identifies the reasonable or acceptable level of decibels and a course of action if the noise levels are exceeded. |
| 8.5 | It was noted that the short-term noise monitoring will be useful to demonstrate the actual noise impact of current operations. |
| 8.6 | Information on flight paths and flight levels will be presented at the next meeting. |

9 Jandakot Airport Update

| 9.1 | INFRASTRUCTURE |
| 9.1.1 | The City of Cockburn has delayed approval of the Jandakot Rd, Berrigan Dr, Dean Rd and Pilatus St intersection agreement. |
| 9.1.2 | Drawings are complete for the design of a signalised intersection at the Berrigan Drive and Karel Ave airport entrance but the City of Cockburn has delayed approval of the |

development application. Andrew Trosic advised that there is disagreement about the overall network and funding. The City of Cockburn needs to ensure that there is an adequate cost-sharing agreement. John Fraser stated that the JAH is funding the entire signalised intersection at the airport entrance. Andrew Trosic responded that the City is looking at the wider impact.

- An MRS Amendment is underway for the East Link Road. The State Government is undertaking further environment studies.
- Precinct 6 and 6A have been cleared and earthworks to create a level site have commenced.

9.2 AVIATION

- A preliminary Draft Major Development Plan has been prepared for the first stage of the airfield works identified in Master Plan 2014. These works include the extension to runway 12/30 and construction of the associated taxiways. Stakeholder consultation has taken place and the Commonwealth Government is reviewing the exposure draft MDP before it is advertised for public comment before Christmas.

9.3 COMMERCIAL

- Site 7A – construction of a carpark adjoining the office building is complete.
- Site 25 – construction of a 120-room hotel is expected to commence next year.
- Site 212 – workshop and office development for Eftech is complete.
- Site 218 – construction is underway on a distribution warehouse for Aldi.
- Site 315 – construction is underway for an office and workshop for PCS.
- Site 501 – construction is underway on the Kmart distribution facility.
- Site 506 – construction is underway on a 1,600m2 office building for Schlumberger.
- Site 514 – construction of a 25,000m² distribution facility for Reece is complete.

10 Correspondence

10.1 No correspondence was noted.

11 General Business

11.1 The Department of Infrastructure and Regional Development is preparing an induction package for new CACG members. Margaret Smythe will provide an update at the next meeting.

11.2 At the previous meeting Graham Ellis asked for procedures on how helicopters should arrive and depart at Jandakot to be tabled. Chris Murray circulated a copy of the relevant pages from the En-Route Supplement Australia (ERSA) pilot guide. Chris noted that helicopters operating under priority (i.e. RAC Rescue helicopter, McDermott fire response) are given direct tracking and may not follow the procedures documented in ERSA. Dino Elpitelli commented that residents don’t have an issue with procedures – the problem is that no one polices or enforces procedures. Chris Murray advised that Air Traffic Controllers will correct the pilot if an aircraft deviates from the directions given in ERSA because it is a safety issue. The Air Traffic Controllers make sure aircraft are operating within the correct flight corridor and at correct height level – because Jandakot is a training airport and the majority of traffic is student pilots it is important to correct anything not being done right.

12 Next Meeting

12.1 The next meeting will be held Wednesday, 2nd March 2016.
